QuickTesting[®] : The Benefits

Prevent cheating, No need to act like a policeman anymore.

- Using the software, you can automatically create versions of the same test by randomly reshuffling the MC questions (and the answers if you wish). Using QuickTesting, you can have as many versions as you like with just one click.
- The students answer exactly the same questions but in a different order (ie: Question number 14 for one version is question number 22 for the other version of the test). Trying to cheat is a waste of time unless a student can locate quite close another student with the same test version.
- Explain the situation to the students in your class and calm down.

Score accurately, huge piles of exam papers, in minutes not weeks.

- * A scanner along with the recognition software “extracts” the actual students answers from the answer sheets with 99.99% accuracy.
- * The software automatically scores each MCQ, produces the final score per student and prints the list with the results.
- * Save valuable teaching time, assign the task to an administrative assistant. The scanner and QuickTesting will do the scoring job for you with little effort from the administrative assistant.
- * 60 minutes for 300 test papers is more than enough for scoring and producing the final list with the marks along with a histogram of the scores achieved.

Maintain data of all previous exams, Available upon request

The system database maintains all the data of all previous exams. Exam papers, participants lists, the actual answers per student, the detailed score per student, even images of the answer sheets are available for inspection.

Statistical scoring data, help you improve the quality of your Testing

QuickTesting automatically generates a histogram of the scores achieved in order to get the “big picture” of the examination.

Statistical data are calculated for each exam question: 1) percentage of students successfully answered the question 2) Percentage of students selected each of the available answers for the question 3) Difficulty index of the question 4) Discrimination ability index of the question.

Using the above data, you can easily identify areas of the material that were not fully understood by your students or questions that are rather vague and should not be used again in the exam.

Quick Testing is expensive

- ◇ What is the value of your productive time spent in a non productive activity like scoring?
- ◇ Have you considered sharing the cost of the system with fellow instructors?
- ◇ Are you aware of Anova Consulting service bureau?

A Transparent scoring process for the Students

- ◆ Students agree that multiple choice scoring is a transparent system.
- ◆ For each question there is a mark for the correct answer and possibly a negative mark for the wrong answer. The final score is the sum of the marks achieved in each question. There is no room for “favors” or “unfair” scoring. The same rules apply to all the students
- ◆ QuickTesting maintains images of the actual answer sheets that can be printed and given to the students that might have doubt about their marks.
- ◆ The software also can produce a detailed report for each student where they can see for each question the correct answer vs their own answer and how their final score was generated.
