

Positive and negative scoring options per question

For each individual question we can define the value (a positive number, usually 1) of the correct answer and the penalty (0 or negative number, usually 0) for the wrong answer.

Question Banks

- ⇒ Creation of question banks per subject, lesson or lesson group.
- ⇒ Ability to relate questions with educational objectives, content, book chapters.
- ⇒ Ability to organize question in categories and subcategories.

Tests

- ◇ Easily create multiple choice tests.
- ◇ Automatically import question from excel.
- ◇ Create versions of the same test by re-shuffling the questions (and the alternative answers)
- ◇ Automatically create tests by selecting questions from the question banks or use the wizard to ask QuickTesting to create a test for you.
- ◇ Output the tests in PDF format for massive printing.
- ◇ Ability to incorporate pictures in your questions.
- ◇ Ability to use scaling in scoring.

Answer Sheets

Our Company undertakes the design and printing of OMR answer sheets according to the strict specifications of the recognition software/hardware modules of QuickTesting and your requirements (logos, number of questions). The answer sheets printed by our Company are tested and approved for the successful scanning and extraction of data.

Statistical Analysis

- Calculation of average and standard deviation of student scores per examination.
- Production of histogram of scores per examination.
- Detailed statistical data per question.
- Statistical evaluation of examination value of each question of a test.
